

# The Leader in Zero Trust Segmentation

Isolate ransomware, build your cyber resilience, and prevent breaches from turning into cyber disasters

## The Answer for Today's Digital Threats

In this era of rapidly escalating cyber threats, Illumio provides the only proven segmentation product suite purpose-built for Zero Trust security.

We believe all organizations should thrive with confidence, assured their digital infrastructure and assets are safe.

To achieve this goal, co-founders Andrew Rubin and PJ Kirner started Illumio in 2013 to build remarkably easy to use security technology that stops hackers and malware from moving laterally through networks.

Illumio Zero Trust Segmentation reveals risks, isolates attacks and secures data across cloud-native applications, hybrid and multi-clouds, data centers and endpoints. We help the world's leading organizations strengthen their cyber resiliency and reduce risk to prevent breaches from becoming cyber disasters.

## A New Approach to Cybersecurity

Illumio provides real-time visibility into your application traffic flows and scalable protection of your most important data through groundbreaking segmentation capabilities.

Quickly isolate core services, separate environments, ring-fence critical assets and control user access.

The Illumio product portfolio helps you at every step of your Zero Trust journey. You can move quickly to block ransomware while easily expanding to more comprehensive protection over time.

Whatever your needs, our suite of capabilities makes advanced segmentation far easier and much more scalable than legacy approaches.

### Illumio Core

#### Workload Security

Illumio Core isolates and protects distributed applications and data down to the workload level.

### Illumio CloudSecure

#### Cloud-Native Security

Illumio CloudSecure makes it easy to discover your risks and protect your cloud-native applications.

### Illumio Edge

#### Endpoint Security

Illumio Edge extends Zero Trust Segmentation to devices to contain malware and cyberattacks.

## Stopping Cyber Disasters. That's What We Do.

#### See Your Risks

Understand your exposure to attacks with a comprehensive and crystal-clear view of the communication flows for your applications and data.

#### Isolate Breaches

Take rapid action to build your cyber resiliency. Isolate critical assets to protect your business against ransomware and cyberattacks.

#### Secure Your Data

Drive Zero Trust protection across your digital infrastructure by automatically, efficiently and safely enforcing least-privilege security policies.

## A Security Architecture for Modern Threats

Detection and perimeter defenses are no longer enough. You will be breached.

Flat networks without segmentation are defenseless against ransomware and cyberattacks. Once in, attackers and malware can move where they please. We stop that.

Built for modern threats, Illumio has pioneered an unprecedented way to orchestrate Zero Trust Segmentation down to the workload and application level, identifying and easily blocking pathways of attack into your digital operations.

Illumio's product portfolio provides a simple view of application communication flows and 24/7 control to stop lateral movement — preventing the spread of breaches across your data centers, clouds and endpoint devices.

Illumio automatically builds a map of your digital environment to deliver risk-based visibility for workloads, applications and endpoints.

With Illumio, you can:

- Proactively and reactively isolate ransomware.
- Identify and close risky pathways and ports.
- Strengthen your incident containment capabilities.
- Ring-fence high-value applications and databases.

Bolstered by almost \$600 million in funding and a \$2.75 billion valuation, Illumio is pioneering a new approach to cybersecurity that protects your digital infrastructure from the inside out.

“With Illumio, we had production assets enforced and under control in months, fulfilling our need to move faster and further our Zero Trust posture.”
